

RuleBook

Insurance

PRECISE. PROVEN. PERFORMANCE.

What is RuleBook for Pricing?

RuleBook for Pricing is a product line agnostic, pricing and quoting tool that has been designed to replace the myriad of pricing spreadsheets that are prevalent across the London and General Insurance markets.

It provides a genuine self-service authoring tool for actuaries to build, test and deploy pricing and quoting solutions. This allows the authoring and maintenance of the solution to remain in the hands of the actuarial and underwriting teams. In addition the potential pricing models can be validated through the use of the in-built 'what-if' scenario module.

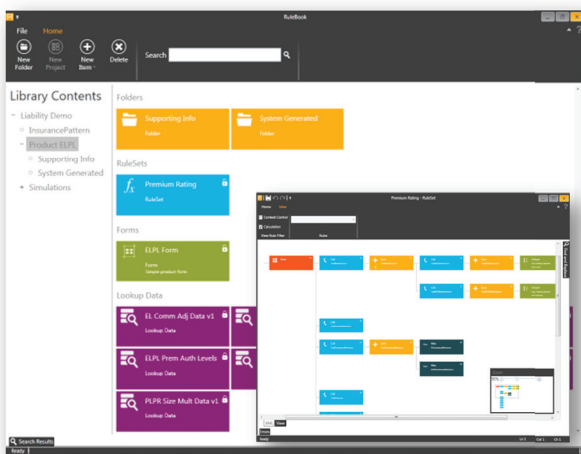

Through its integrated web-based interface underwriters can price their business and offer a quote. The pricing models can be distributed to third parties, such as brokers and coverholders, to support delegated underwriting.

It can be integrated with existing Policy Administration Systems to minimise the rekeying of risk information, reducing the underwriters' administrative workload and helping to address data quality issues. Furthermore, RuleBook complements, rather than replaces functionality within existing Policy Administration Systems, maximising the investment already made in technology.

From a management information perspective, it can be integrated with an organisation's Data Warehouse solution to provide rich pricing and quoting analytics. This integration ensures that the pricing solution can provide context specific performance metrics and pricing information at the time of quoting, facilitating more informed pricing decisions.

It offers a full quote to bind workflow solution and provides the ability to author and produce comprehensive quote documentation, populated with data captured through the pricing process.

RuleBook for Pricing is powered by the Moore Stephens' RuleBook engine, a strategic tool for the creation, maintenance and execution of complex rules all powered by the latest Microsoft technologies.

The RuleBook logo, featuring the word 'RuleBook' in a white sans-serif font with a blue square containing a white 'R' to the left.

What are the benefits?

- **Improved pricing** by allowing actuarial and underwriting teams to respond more quickly to market changes.
- **Extended deployment reach** of pricing models inside and outside the organisation through a web-based interface.
- **Reduced underwriter administrative workload** through integration with Policy Administration Systems and Data Warehouses.
- **Improved surety and auditability** of pricing models to meet internal governance and regulatory needs.
- **Improved confidence and accuracy** in pricing models through mass simulation of pricing scenarios.
- **Reduced risk** from key man dependencies through auto-generated documentation of pricing models.

RuleBook vs. Pricing spreadsheets

	Pricing spreadsheets	RuleBook
